

DOUGLAS MENDES BARRETO

Senior Software Engineering Manager

+1 (581) 748 0657 • mendes-barreto@live.com • [LinkedIn](#) • [GitHub](#) • [Portfolio](#) • Gatineau, QC - Canada

Professional Summary

With **14+ years** in software engineering, I've worked across the full stack, leading teams that build and ship quality products. My focus is on aligning engineering with product and business needs through close collaboration with product and design, strong execution, and clear technical direction.

I'm a pragmatic, hands-on leader who cares about team health, delivery, and engineering quality. I enjoy simplifying processes, guiding technical decisions, and helping teams adopt automation and **AI-augmented workflows** in practical ways that improve day-to-day work.

My goal is simple: build strong teams and scalable products that deliver real business value

Management Skills

- Leading cross-functional teams across product, design, and engineering
- Coaching and mentoring engineers through growth, feedback, and career development
- Managing performance, team health, and difficult conversations with clarity and empathy
- Hiring and building teams aligned with product and engineering needs
- Driving roadmap execution and delivery with Scrum, Kanban, and pragmatic agile practices
- Partnering closely with product managers and designers to align execution with business goals
- Shaping technical strategy, architecture direction, and platform evolution with senior engineers
- Leading migrations, platform improvements, and multi-team initiatives
- Designing engineering processes that improve quality, flow, and team effectiveness
- Communicating clearly with stakeholders through planning, reporting, presentations, and async updates
- Helping teams adopt AI tools and workflows in practical day-to-day work

Tech Skills

- AI-Powered Development Tools: GitHub Copilot, Claude Code, OpenCode, Codex, copilot-cli.
 - Technology Polyglot: Knowledgeable in a wide range of programming languages and frameworks, including Python, JavaScript/TypeScript, Go, C++, C#, Ruby, Swift, Objective-C, and more.
 - GraphQL, RESTful APIs, Microservices Architecture, Event-Driven Systems.
 - Node.js, Next.js, React Native, Native iOS/Android Development.
 - Docker, Kubernetes, CI/CD Pipelines (Jenkins, GitHub Actions).
 - MySQL, PostgreSQL, MongoDB, Redis.
 - Automation, Testing (Unit, Integration, E2E), TDD/BDD.
 - Design Patterns, SOLID Principles, Agile Methodologies (Scrum, Kanban).
-

Professional Experience

Senior Software Engineering Manager

Xpertsea - Predictive shrimp biomass control with AI delivering sustainable aquaculture solutions

51 - 100 employees

Quebec, Canada

Oct 2020 – Present

- Led and mentored a 9-engineer team responsible for delivering and scaling complex applications
 - Managed performance, feedback, and conflict resolution while supporting growth and team health
 - Partnered with product and design to align roadmap, priorities, and execution with business goals
 - Introduced AI-enabled workflows and practical guidance to improve how engineers prototype and deliver
 - Built a self-service AI prototyping workflow that significantly reduced time needed for early product validation
 - Increased delivery speed by 5x, reducing lead time from 13 weeks to 2 weeks
 - Introduced Kanban and trunk-based development to improve flow and reduce process overhead
 - Reworked CI/CD pipelines, reducing build and deploy time from 50 minutes to 7 minutes
 - Led platform and architecture improvements that strengthened scalability, developer experience, and product delivery
 - Directed a full-stack migration from AWS to Google Cloud, reducing infrastructure costs by 20%
 - Improved engineering quality through stronger standards, better async communication, and clearer workflows
 - Oversaw the successful launch of 6 major projects
 - Stayed hands-on across backend, frontend, and computer vision initiatives when needed
-

Senior iOS Developer

Social.mom - Social Media for mothers focused on delivering a safe and supportive environment

11 - 20 employees

Oct 2019 – Oct 2020

- Engineered and maintained a high-traffic iOS application while leading the migration of key features from Objective-C to Swift
 - Led a major re-architecture of the native codebase, reducing maintenance overhead and cutting feature development time by 20%
 - Built automation scripts that eliminated hundreds of hours of repetitive manual work for the team
 - Established a testing culture by introducing unit and E2E testing, improving reliability and release confidence
 - Mentored engineers on software design, SOLID principles, and modern architectural patterns
-

Senior Software Engineer

Levio - Tech Consulting

1K - 5K employees

Jul 2018 – Oct 2019

- Engineered and maintained scalable, high-availability backend services for multiple clients using .NET C#
 - Delivered legacy modernization projects, migrating critical systems from COBOL to modern .NET platforms
 - Led migration from legacy version control systems to Git, improving collaboration and source control practices
 - Worked as a technical consultant with cross-functional teams to define requirements and deliver robust solutions
 - Improved CI pipelines through optimization and automation to support faster, more reliable delivery
-

Senior Mobile Engineer

Concrete Solutions - Tech Consulting

10K+ employees

Jul 2015 – Aug 2018

- Progressed from Developer to Senior Engineer, leading architecture and development for native mobile applications across multiple clients
 - Delivered 3 mobile banking applications and 4 e-commerce apps for financial and retail customers
 - Architected and developed a white-label e-commerce mobile platform that enabled rapid rollout of customized storefronts from one codebase
 - Delivered internal technical talks on coding standards, testing practices, and QA implementation
 - Designed and implemented CI/CD pipelines with Jenkins, Bitrise, and Travis CI, while promoting TDD/BDD with XCTest and Kif
-

Lead Game Programmer

Editora Globo - Publisher and developer of digital entertainment products

500 - 1K employees

Aug 2010 – Apr 2015

- Progressed from Programmer to Lead, managing the game development lifecycle alongside technical leadership responsibilities
 - Led end-to-end development of cross-platform games for iOS, Android, and Windows using C# and Unity3D
 - Architected and built backend services for MMO games, including login systems and room controllers, using SmartFoxServer with Java and MySQL
 - Designed a reusable Unity3D framework and custom engine tooling that significantly improved team productivity
 - Implemented JIRA to formalize planning and execution processes
-

Junior Analyst Programmer

People Way - Tech Consulting

11 - 50 employees

Apr 2009 – Feb 2010

- Developed and maintained enterprise web applications using J2EE, JSP, JSF, and SOAP web services
 - Managed client data lifecycle work including MySQL database design and JasperReport-based reporting
 - Built data parsing scripts to process SMS, XML, and CSV sources
-

Education

University Anhembi Morumbi

Bachelor's Degree in Game Design and Development - 2010

Languages

- English: Fluent
- Portuguese: Native
- French: Professional

Main Projects

Kampi (Xpertsea)

Intelligent copilot for shrimp farmers using AI and computer vision to replace manual guesswork with data-driven insights. Features three pillars: Pond Vision for biometric monitoring via smartphone photos, Optima for predictive analytics and growth forecasting, and FarmBook for team coordination across the production chain.

Tech Stack: Python, TypeScript/JS, MongoDB, MySQL, Node.js, Bun, Next.js, Google Cloud, Terraform, Ansible, C++, Android, iOS, React Native + Native Development

Link: <https://bekampi.com/>

- Led a cross-functional team in development of an AI-powered platform spanning computer vision, predictive analytics, and operational workflows
 - Defined technical direction for predictive systems and computer vision capabilities
 - Managed the technical roadmap for an omnichannel platform supporting iOS, iPadOS, and web
 - Directed infrastructure modernization using Google Cloud, Terraform, and Ansible
-

Social.Mom (Social.mom)

Social network platform designed to counter social isolation during motherhood and reinforce the social safety net of families. Enables mothers to connect locally, plan activities, and access community groups and organizations in their area through a bilingual interface.

Tech Stack: iOS native, Android native, Java Spring Boot, React

Link: <https://social.mom/en>

- Owned major iOS development work for a high-traffic bilingual social platform
 - Led native re-architecture efforts that reduced maintenance overhead and improved delivery speed
 - Introduced testing practices that strengthened reliability and release confidence
-

Meu Carrefour (Carrefour Brazil)

All-in-one retail companion and cornerstone of Carrefour Brazil's omnichannel strategy, empowering millions of users to manage loyalty rewards, shop for groceries online, and streamline in-store visits through smart utility tools like barcode scanning and proximity services.

Tech Stack: iOS native, TypeScript, Node.js, Java

- Developed a mobile shopping experience with barcode scanning and store locator capabilities
 - Implemented loyalty program integration with discount and cashback tracking
 - Built shopping list management with cross-platform synchronization
-

Itaú Unibanco Mobile Banking (Itaú Unibanco)

Mobile banking application for one of Brazil's largest financial institutions, providing users with secure access to core banking services including account management and financial transactions.

Tech Stack: Windows Phone, iOS, .NET

- Built secure authentication flows for mobile banking access
 - Developed account visibility features including transaction history
 - Implemented transfers and payments as part of the core banking experience
-

Mundo do Sítio (Editora Globo)

Persistent, multi-user virtual world designed to integrate pedagogical goals with immersive gameplay as a digital extension of the Sítio do Picapau Amarelo IP. Featured complex economy, social interactions, and library of educational mini-games for millions of Brazilian students.

Tech Stack: Unity 3D, Flash ActionScript (SWC), Java, SmartFox Server, HTML5/JS

- Engineered full-stack architecture for high-concurrency traffic and low-latency communication
 - Developed gameplay systems and real-time state synchronization for 30+ educational mini-games
 - Implemented secure authentication, profile registration, and parental controls for a children's platform
-
